Select the installation type. You can install roles and features on a running physical computer or virtual machine, or on an offline virtual hard disk (VHD).

☒ **Role-based or feature-based installation**
Configure a single server by adding roles, role services, and features.

☐ **Remote Desktop Services installation**
Install required role services for Virtual Desktop Infrastructure (VDI) to create a virtual machine-based or session-based desktop deployment.

6. On the window that pops up, Click the “Add Features” button to incorporate the required features.

Click “Next”.

Add features that are required for File Server Resource Manager?

The following tools are required to manage this feature, but do not have to be installed on the same server.

Remote Server Administration Tools

- Role Administration Tools
 - File Services Tools
 - [Tools] File Server Resource Manager Tools

☒ Include management tools (if applicable)

Add Features Cancel

7. If you do not need to add any extra features, just leave the default settings and click “Next”.

8. Confirm the installation selections and Click “Install” to start the process.

9. After the installation process is complete, click the “Close” button.

10. You can now access the File Server Resource Manager from the administrative interface and use it to create quotas.

CREATING QUOTAS USING FSRM

As earlier mentioned, quota management enables you to set restrictions and define the extent of space available for users in the server. For example, you can limit all users to a maximum of 5GB on a shared folder. As such, the users cannot add data to the folder that exceeds 5GB.

You can also configure the File Server Resource Manager tool to be sending notifications whenever the specified usage limit is reached. For example, you can specify that an email is to be sent if 85% of the space has been consumed.

Creating quotas using the FSRM tool is a two-step process:

- Create a template
- Create a quota

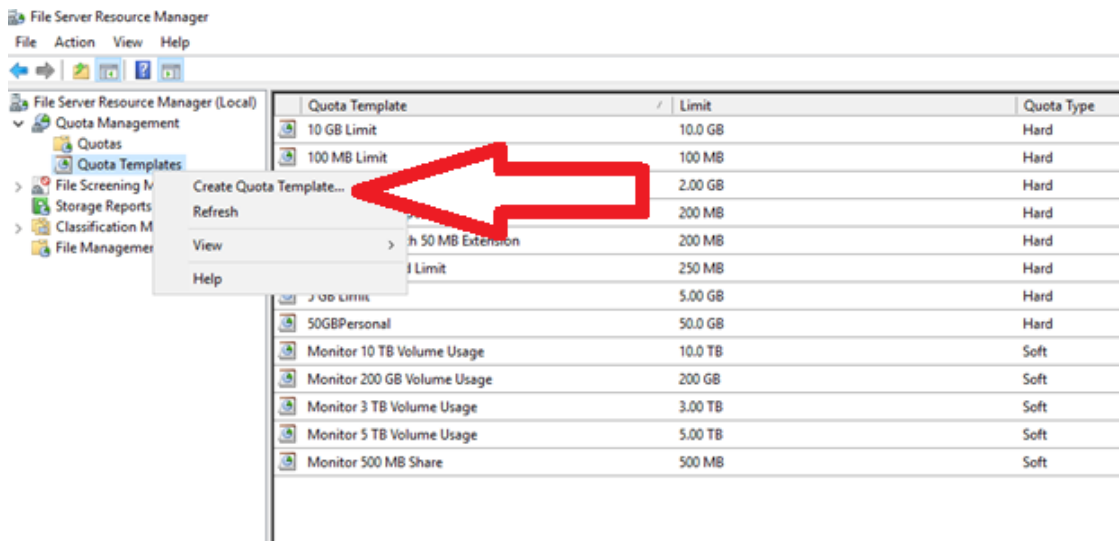

a) Create a template

Before setting quotas, you need to either create a quota template or choose a default template already available on the File Server Resource Manager tool.

It is recommended that you create quotas solely from templates. This way, you can easily manage your quotas by making changes to the templates rather than the individual quotas. The one central location for managing quotas eases the enactment of storage policy rules.

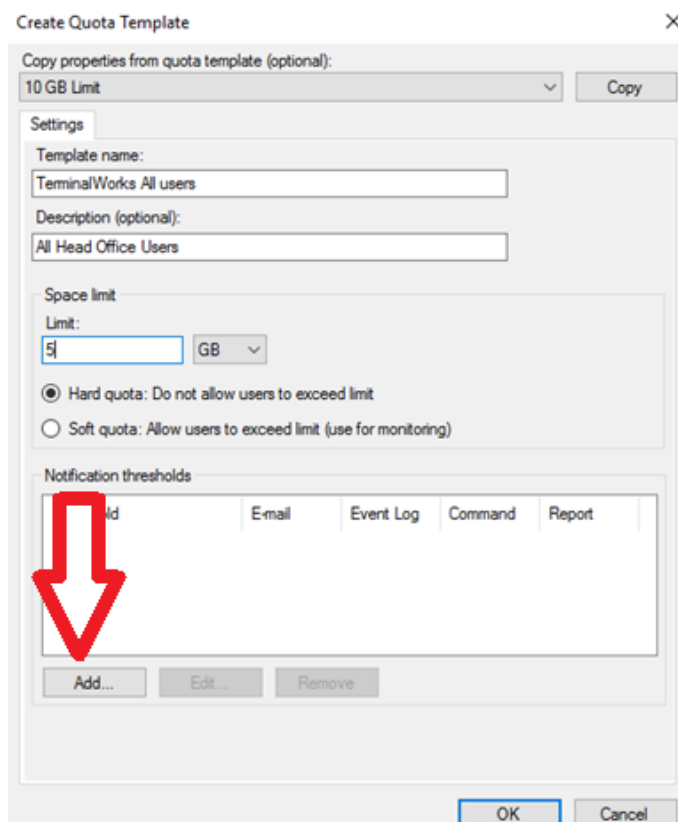

Here are the steps for creating a quota template.

1. Under the “Quota Management” Section, right-click the “Quota Templates” button and go for “Create Quota Template”.

2. On the window that pops up, enter the Template name and the space limit. If you choose the “Hard quota” option, users will be unable to surpass the specified limit. A hard quota is good for controlling the amount of data allowed on a folder or a disk.

On the other hand, if you select the “Soft quota” option, users will be able to exceed the allocated limit. A soft quota is mostly used for monitoring space usage and producing notifications.

3. Lastly, to set notification thresholds, press the “Add” button. On the window that pops up, input your notification specifications.

You can specify that an email is to be sent, an entry is to be made to the event log, a command is to be run, or a report is to be generated. For example, you can state that whenever usage reaches 85%, send an email message to the administrator.

Thereafter, click “OK” to complete creating the quota template.

Add Threshold

Generate notifications when usage reaches (%):
85

Email Message | Event Log | Command | Report

☒ Send e-mail to the following administrators:
Format: account@domain. Use semicolons to separate accounts.

☐ Send e-mail to the user who exceeded the threshold

Email message

Type the text to use for the Subject line and message.
To identify the quota, limit, usage, or other information about the current threshold, you can use Insert Variable to insert a variable in your text.

Subject:
[Quota Threshold]% quota threshold exceeded

Message body:
User [Source Io Owner] has exceeded the [Quota Threshold]% quota threshold for the quota on [Quota Path] on server [Server]. The quota limit is [Quota Limit MB] MB, and [Quota Used MB] MB currently is in use ([Quota Used Percent]% of limit).

Select variable to insert:
[Admin Email] | Insert Variable

Inserts the e-mail addresses of the administrators who receive the message.

Add Email Headers...

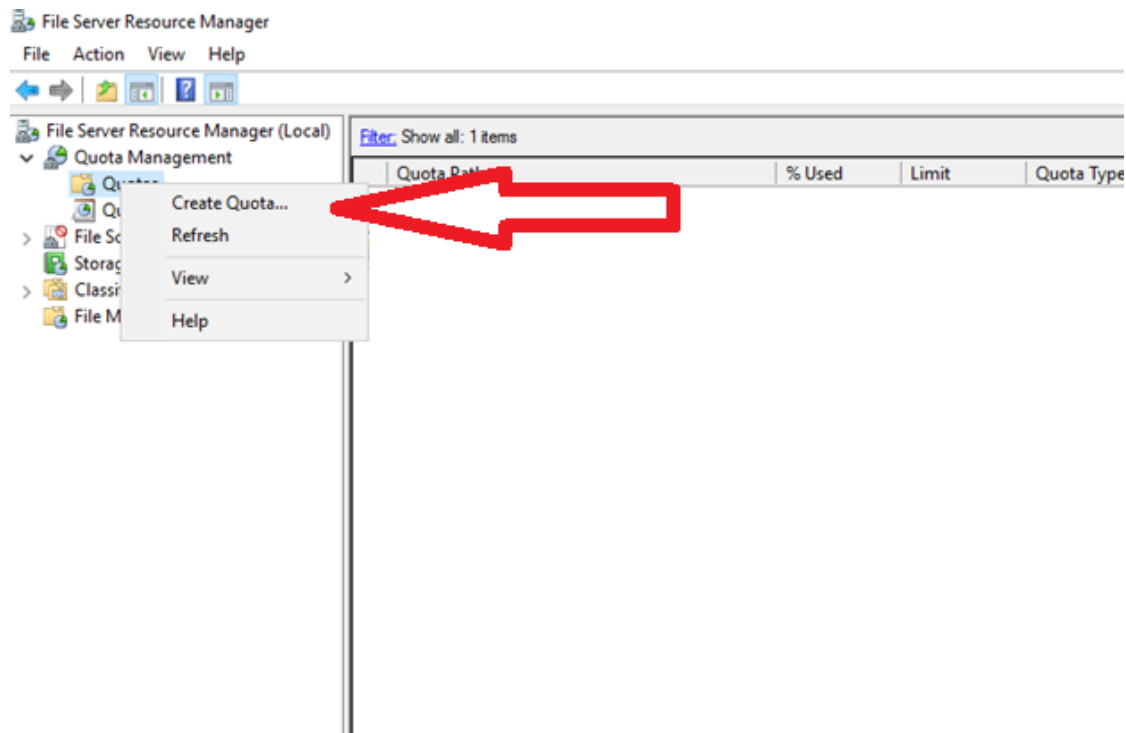

OK | Cancel

b) Create a quota

After setting up the quota template or using a default quota template, you need to create the quota.

Here are the steps for creating a quota.

1. On the File Server Resource Manager’s dashboard, right-click on “Quotas” and go for “Create Quota”.

2. On the “Create Quota” window, in the “Quota path” section, browse the path to the volume or folder that the storage capacity restriction will be applied.

Then, choose either the “Create quota on path” or the “Auto apply template and create quota...” option.

If you select the first option, quota will only be applied to the primary folder. For example, if you limit the parent folder to only 5GB, then the other subfolders will share the space specified in the main folder.

On the other hand, if you choose the second option, then the quota will also be applied to the subfolders. For example, if you restrict the main folder to 5GB, then the subfolders will also have individual quotas of 5GB each.

Subsequently, on the “Derive properties from this quota template” option, choose the template you created previously.

If satisfied with the quota properties, click “Create”.

Create Quota

Quota path:

Browse...

☒ Create quota on path
☐ Auto apply template and create quotas on existing and new subfolders

Quota properties

You can either use properties from a quota template or define custom quota properties.

How do you want to configure quota properties?

☒ Derive properties from this quota template (recommended):
50GBPersonal

☐ Define custom quota properties
Custom Properties ...

Summary of quota properties:

Quota:
- Source template: 50GBPersonal
- Limit: 50.0 GB (Hard)
- Notification: 1

Create Cancel

After you've created the quota, you can see it on the File Server Resource Manager's dashboard. Thereafter, you'll be able to limit the amount of space allowed on your shared resources.
